## ABSTRACT

ABSIACI

Introduction Smoking significantly influences health, one of which is cholestered levels. As a result of the absorption of nicotine contained in cigareties so that it can trigger the release of caccholomines, cortised and growth hormones. The release of this hormone will activate of caccholomines, cortised and growth hormones. The release of this hormone will activate contained to the production of the possible of the five the recard level of growth hormone and catecholomines can cause an increase in installar release in the blood, so the hormone and catecholomines can cause an increase in installar release in the blood, so the hormone and catecholomines can cause an increase in installar release in the blood, so the total cholesterio lipses (EPs) will decrease. This vide cause changes in serious lipse the total cholesterio level in active smoking and passive smoking. Morthal treature review reviews 3 articles about total cholesterol levels in active smokers and passive smokers from 2015 to 2003. Search for articles submy the PEO method with the keywords total cholesterol and smokers on Google Scholor and Science Dever. Results all articles found that the average total cholesterol level in active smoking. While charge is a chief to a chief and a singular difference between total cholesterol levels in active and
