ABSTRAK

Pendahuluan Stunting merupakan salah satu masalah yang menghambat perkembangan manusia secara global. Salah satu faktor penyebab stunting yaitu pemberian ASI eksklusif. Tujuan penelitian adalah untuk mengetahui hubungan pemberian ASI Eksklusif dengan kejadian stunting pada balita usia 25-59 bulan di posyandu Desa Drajat Wilayah Kerja Puskesmas Baureno Kabupaten Bojonegoro. **Desain** penelitian menggunakan *case control*. Populasi penelitian adalah seluruh balita usia 25-59 bulan dengan sampel 60 Balita sebagai kelompok Kontrol dan 41 Balita sebagai kelompok kasus menggunakan teknik *Simple Random Sampling*. Menggunakan data sekunder yaitu buku KIA dan data primer yaitu Kuesioner. Teknik Analisa univariat dan Analisa bivariat dengan Uji *Chi Square*. **Hasil** penelitian menunjukkan Balita usia 25-59 bulan yang tidak mendapat ASI Eksklusif memiliki kategori sangat pendek (<-3 SD) yaitu 21 Balita (51,2%) dan Balita usia 25-59 bulan yang mendapat ASI Eksklusif yaitu sebanyak 9 Balita (15,0 %). Ada hubungan yang signifikan antara pemberian ASI eksklusif dengan kejadian stunting dengan nilai $CI = 18,635$ dan $p = 0,000$. **Kesimpulan** Ada Hubungan Pemberian ASI Eksklusif Dengan Kejadian Stunting Pada Balita Usia 25-59 Bulan Di Posyandu Desa Drajat Wilayah Kerja Puskesmas Baureno Kabupaten Bojonegoro

Kata kunci: ASI Eksklusif, Stunting, Balita Usia 25-59 Bulan

RELATIONSHIP OF EXCLUSIVE BREASTFEEDING WITH THE INCIDENCE OF STUNTING IN TODDLER AGED 25-59 MONTHS AT THE INTEGRATED HEALTHCARE CENTER OF DRAJAT VILLAGE THE WORKING AREA OF THE BAURENO COMMUNITY HEALTH CENTER BOJONEGORO DISTRICT

ABSTRACT

Introduction Stunting is one of the problems that hinders human development globally. One of the factors causing stunting is exclusive breastfeeding. The aim of this study was to know the Relationship Of Exclusive Breastfeeding With The Incidence Of Stunting In Toddler Aged 25-59 Months At The Integrated Healthcare Center Of Drajat Village The Working Area Of The Baureno Community Health Center Bojonegoro Regency. **The design** used case control. The population were all Toddler Aged 25-59 months with sample 60 toddler as a control group and 41 toddler as case group using Simple Random Sampling technique. The instrument uses secondary data with KIA book and Primary data with questionnaires. Univariate analysis techniques and bivariate analysis with Uji Chi Square. **The results** showed that toddler aged 25-59 months who did not receive exclusive breastfeeding were categorized as very short (<-3 SD) as many as 21 toddlers (51.2%) and toddler 25-59 months who received exclusive breastfeeding were 9 toddlers (15.0 %). There is a significant relationship between exclusive breastfeeding with the incidence of stunting value $CI = 18,635$ and $p = 0,000$. **Conclusion** There is a relationship between exclusive breastfeeding
