ABSTRAK

Pendahuluan Beberapa masalah yang terjadi pada isu nifas salah satunya adalah kesuliran sat buang air besar atau yang disebut konstipasi, Masalah penelirian nin masih banyak ibu nifas yang mengalami konstipasi. Tujuan penelirian intakan tenganalisis pengarah konsumsi makanan tinggi serat dengan kejadian konstipasi pada biraka. Desain penelirian ini adalah analifik yang menggundan pesdekatan cross sectional. Popilasi sejamiha 30 birak pada nalifik yang menggundan pesdekatan cross sectional. Popilasi sejamiha 30 birak nifak. Notiraki endependah sonsumi saturan tinggi setal dan varibabil sapechen konstipasi, Data dikumpulkan menggundan kankanan tinggi anda navanbel sapechen konstipasi, Data dikumpulkan menggundan kensengan di pada pendahan selami terpandah pengangkan selamih responden yang mengkonsumsi makanan tinggi serat kurang, sejadi konstipasi yatu sejamiha? O ang (100,6%), dan hampir selamih responden yang mengkonsumsi makanan tinggi serat kurang, sejadi konstipasi yatu kepidah kensipasi kepidah kensipasi kepidah konstipasi yatu kepidah kensipasi kepidah kensipasi ken

Kata Kunci : Konsumsi Makanan Tinggi Serat, Konstipasi, Ibu Nifas.

ABSTRACT

Introduction Some of the problems that occur in prosperum mothers, one of which is difficulty with defiguing or what is called consulpation. The problem of this research is that difficulty with defiguing or what is called consulpation. The problem of this research is that objective was to unknown to effect of consumption of high-filter foods with the incidence of consulpation in posperum mothers. The interpolate guest was total sampling and was to the same proposition was 30 possparum mothers. The interpolate variable is consulpation. Data were collected using that the sample size was 30 possparum mothers in exampling useful was total sampling excitomations, then substant of an analysed with the contingency coefficient test, significant level a - 0.05 (p <-0.7 The results showed that all respondents who consumed high-filter goods had less consuppation, much by people (10.07%), and almost all respondents who consumed high-filter with the consumption of the consumption of the consumption of the consultation of the consumption of the consultation of the consultation of the consultation of the consultation of high-filter nutritional needs with the incidence of possparum constitution. The conclusion of
