RELATIONSHIP BETWEEN EARLY INITIATION OF BREASTFEEDING AND REFLEX BREASTFEEDING IN NEW BORN

ABSTRACT

Introduction Earls initiation of broast-feing is an action that must be taken by mothers of the State of the Adult in the State of the Inst five years. The deeping of this thesis uses a Literaure Review, uses 4 daubusess (e-Recorders, National Library, Georgie Scholar, Seeine Direct and Pubbled) using a pre-experimental study deeping postere on which state, undustried observations and cross-sectional. In the form of reflex, "newborn" and found 10 articles that much the predetermined inclusion criteria. In this study, the determination of early beautified united in and breast federing reflex in infinits using a questionnaire (n = 3) and observation in = 5). The contributing factors in the study of early breast/feeding infinition were mostly cross-sectional. The results of and reflex of breast/feeding in newborns was 50% indicating a significant association only results of the State of the S
