NURSING CARE IN NON HEMORAGIC STROKE CLIENTS WITH THE INFECTIVE PROBLEM OF CULTURAL NETWORK PERFUSION (Study In The Krissan Space General Hospital Bangil Pasuruhan Area)

## ABSTRACT

Introduction Stroke is a universal problem of one of the killers in the world, whereas in Indonesia stroke has a high rate of disability and death. Patients with mon-hemorrhagic stroke cam cause inflective cerebral tissue perfusion, which if left untreated, will increase intracranial pressure, and cause death. The purpose of this study was dist to carry out musting area for non-hemorrhagic stroke clients with the problem of the ineffectiveness of cerebral tissue perfusion in the krissan room of Bangil Pasurum Regional Hospital. This method uses the case study method, which was conducted on 2 non-hemorrhagic stroke clients with problems of ineffective excelent itsue perfusion. Data collection by interview, observation and physical examination. Data analysis by collecting data, reviewing data and conclusions. Research ethnics, approval letter, anonymous, confidentially. The results of the
