NURSING ASSOCIANTION IN BRONKHIAL ASMA CLIENTS WITH THE INFECTIVE PERPBLEM OF THE STUDY OF NAFAS PATTERNS (Study In The HCU Melati Space General Hospital Bangil Pasuruhan Area)

Introduction Bronchial asthma is one of the respiratory diseases that are often found in the community. The respiratory tract reacts to narrowing and blocking the incoming air to cause clinical maligestations, cassing problems, one of which is the inefficive breathing pattern. The purpose general objective is able to curry out the justificial patterns in the justime room of Bongil Pasurama Regional Hospital. The method of this study used the case study method. Participants in this case were performed on 2 bronchial asthma clients with problems with ineffective breating patterns. The results of the marsing assessment conducted for client 1 and client 2 are different. In client 2 complained of tightness, coughing and chest pain. In client 1 there was ni langging breath and client 2 had langging breath. Conductions based on the evaluation of nursing on client 1 and 2 the first day until the third day is field as the client has not
