ANALISA KADAR KARBOHIDRA PADA GADUNG (DIOSCOREA HISPIDA DENNST) DENGAN PERENDAMAN ABU SEKAM DAN GARAM NATRIUM KLORIDA (NaCI)

email : Tututrezki29@gmail.com email : farach.khanifah@gmail.com email : any isro'aini@yahoo.co.id

ABSTRAK

Pondahulum umbi galung menyadan tumbulan yang kaya akan karbohidata. Namun jarang sekali gadung di konsumsi oleh muyamkat. Tujuan pada poelitian ini yatu umta kenceptahui kada karbohidata pada gadung dengan percadaman abu sekam dan garam. Metode desain penelitian oksiyifi yang mengjabakan hasil dai nainsik sadar karbohidat pada gadung dengan perendaman abu sekam penelitian deskriptif yang menggabakan hasil dai nainsik sadar karbohidat pada gadung dengan perendaman abu dan garam. Populasi gadung di pasar kandagan kediri sebanyak 2 sampel. Sampling menggamakan teksi sampling dan versibed gadung- Pengunpulan data sampling dan versibed gadung- Pengunpulan data presentase gadung dengan perendaman abu sekam dan garam Natirum Klorida NaCI. Hasil pengungkan di bahabat dan barang dengan perendaman abu sekam dan garam natirum Klorida NaCI di dapatkan pada perendaman abu sekam dan garam natirum Klorida NaCI di dapatkan pada perendaman abu sekam dan garam satirum Keinda NaCI di dapatkan pada perendaman abu sekam dan garam natirum Keinda NaCI debin penelitian ini hasil yang di dapatkan pada perendaman abu sekam dan perandamak pengunah dan perendaman barang dan pengungkan perendaman barang kang di dapatkan pada perendaman abu sekam perendaman barang dan pengungkan perendaman barang satirum kibrida NaCI lebih rendah. Bagi peneliti selanjatnya dibarpan bagi peneliti selanjutnya dapat menletik kandungan pada kripik gadung ataran hinu ji poten dan laimpa.

Kata kunci: Karbohidrat, Gadung, Perendaman, Abu, Garam

ANALYSIS OF CARBOHYDRA CONDITIONS IN GADUNG (DIOSCOREA HISPIDE DENNST) WITH SOAKING HUSB ASH AND NATRIUM CHLORIDE SALT (NaCl)

Introduction Galung tubers are plants that are rich in carbohydrates. However, people rarely consume gading, The purpose of this study was to determine the carbohydrate content of the galung by soaking the than ski and said. In Freeseach design method used it quantitative. This type of research uses descriptive research that describes the results of the analysis of carbohydrate content in gadang by immersing aid and said. The population of gading in the kandangan marker of Kediri is 2 samples. Sampling using tond sampling and gading variables. Data collection using laboratory observation. In data presenting using tubes and calculating the percentage of gading by socking links as and sodame richorder. STREs Laboratory, Frant 2 gading unghes with socking links as and admit exhibit NGC sait were obtained in socking with 6 sail to specify the conclusion in this study that the results obtained in the admirestion were 6.12 geams and in sail 48.72 grams the carbohydrate content in salt was lower. Suggestions for the public are expected that the community uses sail in the immersion were 6.21 geams and in salt 48.72 grams the carbohydrates contained in the sooking sodium chloride NGCI are lower. For
