Kata kunci: Salmonella typhi, Ekstrak daun kelor, Daya hambat minimal

THE MINIMUM INHIBITION CONSENTRATION OF KELOR LEAF (MORINGA OLEIFERA) TOWARD SALMONELLA TYPHI BACTERIA

ABSTRACT

Introduction Moringo delifera tree rich substances which have many advantages in health and medical treatment. Moringo has reported that has antihacterial activities either positive and negative gram, ore of them is shomoulted sphi. The approace of his review interature is to know about the inhibition of Moringa extract towards Sulmonellat sphi bacteria. Design of this research is literature review. The method of his research is saing Sulmonellat sphi and Moringa extract. The result from this research, is gest that Moringa extract could mithibit they proving of Sulmonella sphi bacteria on Moringa extract towards with the summing extract literature by some factors. They are the materials of Moringa extract, genetic, environment and method of Moringa cuttum. Suggestions for researchers who are interested in researching the literature review method, some things that need to be considered are the validity, results, and releases of an extensific format victimes of the complete data can be obtained for and releases of an extensific format victimes of the complete data can be obtained for
